Physics Classroom Momentum Impulse And

Momentum change equals the impulse; if each cart has the same impulse, then it would follow that they have the same momentum change. 2. In a physics demonstration, two identical balloons (A and B) are propelled across the room on horizontal guide wires.

Theorem. The impulse-momentum theorem states that the change in momentum of an object equals the impulse applied to it. $J = \Delta p$. If mass is constant, then... $F\Delta t = m\Delta v$. If mass is changing, then... $F dt = m dv + v dm$. The impulse-momentum theorem is logically equivalent to Newton's second law of motion (the force law). Units
